Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Response to Arguments

Applicant's arguments with respect to claims 7-12 have been considered but are moot in view of the new ground(s) of rejection.

Election/Restrictions

Claims 1-6, 13-15 remain withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in Paper No. 7.

Claim Rejections - 35 USC § 103

Claims 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view of Parisi. APA is the process and it's problems discussed on the first few pages of the specification. This includes the treatment of water absorbent resins with one of the steps being storing the ground material in a tank. The problem with using the tank for storage is that the material tends to agglomerate in the tank prior to it's use. Parisi solves this problem by disclosing a similar process including delivering resin material to heated storage tank 30. Use of heat here increases fluidity of the resin which is analogous to preventing material agglomeration. Therefore, in order to prevent agglomeration in the tank, it would have been obvious for one of ordinary skill in the art to modify APA by providing means to heat the tank, taught to be desirable by Parisi. The remaining limitations would then have been obvious design choices only as they relate to desired materials to be treated.
